SKILLS

- Altium Designer
- NI Multisim
- LTSpice
- MATLAB
- C++ Programming
- Microsoft Office Suite
- AutoCAD
- Soldering
- Collaboration
- Problem Solving
- Control Systems

ACADEMIC WORK

Seattle Pacific University 2022-Present

- Electrical Engineering Major
- Appropriate and Sustainable engineering Minor

Projects

- Airborne Wind Energy Generator
- Multilevel Voltage Regulator
- Bandpass Sallen Key circuit
- Aquatic Weather Probe
- Laser Tag System
- Fuel Sensor

Classes

- Electronics 1-4
- Logic System Design
- Computer Organization
- Signals and Systems
- Microgrids
- Power Systems

WORK EXPERIENCE

Electrical Engineering Internship

OneEnergy Renewables

June 2025 - September 2025

- Supported utility scale solar projects by designing PV layouts, wiring diagrams, site maps, and single line diagrams used for contractor bidding and development.
- Modeled system performance using PVsyst, SAM, and custom weather models, comparing simulated output with real site data to improve accuracy.
- Used AutoCAD, GIS, and Civil 3D to assess buildable terrain, refine layouts as site constraints evolved, and maintain design standards across projects.
- Contributed to interconnection reviews and collaborated with engineering teams on projects ranging from 2 MW community solar to 250 MW utility scale developments

Falcon Racing, BAJA SAE, Electrical Team

Seattle Pacific University

August 2025 - Present

- Designed and implemented the Baja SAE vehicle's power distribution system, including fusing and protective circuitry, to ensure reliable 12V operation.
- Developed a fuel level sensing system to monitor remaining fuel and integrate with the vehicle's electrical architecture.
- Designed a custom 3D printed enclosure and ensured all electrical systems complied with SAE Baja regulations.

Vice President of Engineering Student Council

Seattle Pacific University

September 2023 - Present

- Serve as the primary liaison between students and faculty to address academic concerns, advocate for policy changes, and improve the overall student experience.
- Organize events and programs to foster engagement and build community within the Engineering student population.

Lead Resident Advisor

Seattle Pacific University

August 2023 - Present

- Facilitating weekly floor events to foster community
- Mediating student conflicts, and providing resources to help resolve issues
- Developing programs to engage and educate residents on mental health, financial literacy, and whole person wellness

PUBLICATION

IEEE Research Paper

Accepted June 2025

A Framework on Hosting Capacity for Airborne Wind Energy in Urban Environments

- Designed a framework to evaluate hosting capacity for airborne wind systems in cities
- Assessed transformer, substation, and line constraints for reliable integration
- Simulated AWE performance using CFD and Wind Energy Conversion Systems
